

### Building the application:

Run `mvn compile exec:java` In the command line or add a configuration for Maven in IntelliJ that has the command line `exec:java`

### Open the application:

Open up a browser window and go to localhost:4567. If you wish you test multiple players, you will need to open this page in a separate browser for each player.

### How to setup a Double Jump and Crown King:

REDS MOVES (from REDS perspective, these are 0 indexed, (0,0) is the bottom left corner)

1. Move the piece at position (4,2) to (3,4)
2. Move piece at (6,2) to (7,3)
3. Move piece at (7,1) to (6,2)
4. Move piece at (0,6) to (7,1)

WHITES MOVES (from WHITES perspective, these are 0 indexed, (0,0) is the bottom left corner)

1. Move piece at (0,2) to (1,3)
2. Move piece at (1,1) to (0,2)
3. Move piece at (4,2) to (5,3)
4. Double Jump with the piece at (5,3)

If you did this properly, the board should look like this:
